

Existing Facility Retrofit

This graph depicts the TRU waste storage situation if WIPP does not open and existing buildings are used for waste storage. The amount of TRU waste, depicted by the bars, is the same as on the previous graph. In fiscal year 1999, the 750 pad tents are added for storage of the pipe overpack units. In 2001, the Building 460 highbay is ready to accept waste. The pipe overpacks are moved to 460 and the 750 pad tents are closed. In fiscal year 2002, Building 551 is certified for waste acceptance. Building 865 is added in fiscal year 2004. Finally, in 2006, Building 883 begins accepting waste. **Buildings 883, 865, 551, 460, 440, 664, and 991 will continue operating until WIPP opens or alternative storage is available.**
